Sage Job Costing Professional
- Key Features and Benefits

Sage Job Costing Professional has been designed for businesses with more specialised requirements. Along with all the benefits available with Job Costing, it offers additional features to give you much greater control over your finances.

Multi-user capability - This facility allows several people to use the software simultaneously, thereby increasing efficiency and improving use of resources.

Purchase order processing - By using purchase orders it's much easier to track your purchases, analyse costs and increase control over what you buy for specific projects.

Extra invoice matching - This is an additional feature associated with purchase order processing. Essentially it automatically compares invoices received with both your original purchase order and the Goods Received Note. If there is any variance or overcharging, the program alerts you so that you can take immediate action.

Control of committed costs - The system of purchase orders also helps you to budget for costs that you have committed to, but haven't yet been invoiced for.

Additional cost categories - Sage Job Costing Professional allows you to define a further 10 cost categories in addition to the standard categories such as Labour and Materials. This makes the product even more flexible for different industries.

Batch timesheet entry - This helps you save time by processing all your timesheets in a single batch rather than entering all the details on an individual basis.

Multiple customer billing - This feature is ideal for those companies that have more than one customer for a particular project.

Sage Job Costing -
Key Features and Benefits

Puts you in control - Allows you to define and track all cost elements of every job. By measuring your costs accurately you can control them.

Simplifies billing - Invoice totals can be automatically calculated according to your choice of billing method, e.g. cost plus, fixed price, or a combination of charges based upon time, materials and other costs.

Flexible cost structures - You can define multi-teired cost structures so you can create a tailor made solution for your business.

Links with Sage Line 50 Accounts and Payroll - Sage Job Costing is designed to work together with other Sage products as an integrated cost accounting solution.

Be efficient and accurate - Quickly transfer costing data from your Sage accounts packages, ensuring consistency and accuracy, and saving you valuable time.
